Blooming Garden

FROM NATURE FOR NATURE

Inspiration for a new trend comes out from flowers:
roses, daisies, orchids, magnolias, bouquets and tulips become the main characters of home decor, bringing colours and a lot for Green in your home.
Ecology and sustainability topics embrace this trend as to propose lively and ecological products that are renewable and sustainable at same time.
Bloomings establish themselves as a rebirth, changing, love for nature and life symbols while design and technology of new materials give determination and personality to home rooms without compromising our ecosystem.
